SUMMARY

Recent M.S. Information Technology graduate from Arizona State University with hands-on experience in business intelligence, data analysis, and AI-assisted analytics. Built Python/SQL data workflows, analyzed 30,000+ marketplace records in Tableau, developed Power BI cost analysis, and improved semantic retrieval precision from 62% to 89% at Virtusa. Skilled in Python, SQL, Pandas, Tableau, Power BI, Excel, Databricks, ETL, statistical analysis, and LLM workflow automation.

EDUCATION

Arizona State University | *Masters in Information Technology* (GPA: 4.00) **May 2026**

Savitribai Phule Pune University | *Bachelors in Information Technology* (GPA: 3.64) **Jun 2024**

PROFESSIONAL EXPERIENCE

Virtusa Corporation | *Data Science Intern (AI/ML)* **Apr 2024 - Jul 2024**

- Analyzed document datasets for 2 internal AI prototypes using Python, Pandas, SQL, and Databricks, comparing preprocessing, chunking, and retrieval configurations to improve semantic retrieval precision from 62% to 89%.
- Built evaluation workflows to track retrieval latency, relevance, and system performance, reducing document retrieval latency by 65% and eliminating 40+ hours/month of manual lookups.
- Containerized two data/AI applications with Docker, implemented CI/CD pipelines on Google Cloud Platform, and added evaluation-metric monitoring to streamline deployments and ensure consistent prototype performance.

Ural Federal University | *Data Science Intern* **Jul 2023 - Jul 2023**

- Led the data workstream for Alternovation, prepared structured furniture data, and developed a Python and CatBoost cost-estimation workflow, enabling more accurate product pricing analysis.
- Built a Power BI analysis covering 146 furniture items and presented cost and product insights with a 5-member international team; the project earned the Best Project Award.

PROJECTS

NYC Airbnb Market Intelligence

- Analyzed 30,000+ NYC Airbnb listings to identify pricing, review-quality, host-behavior, property-type, and neighborhood trends for market-level decision analysis.
- Built an interactive Tableau dashboard with calculated fields, dynamic filters, maps, distributions, and cross-chart interactions; developed neighborhood/room-type pricing comparisons and host segmentation.

Alternovation - Furniture Price Prediction

- Developed an ML-assisted cost-estimation workflow from structured furniture attributes and connected outputs to business-intelligence reporting for pricing and cost trade-off analysis.
- Created a Power BI dashboard covering 146 products and helped lead the 5-member international team to the Best Project Award at Ural Federal University.

Predictive Disease Risk & Readmission Analysis

- Developed Random Forest-based predictive models in Python with Pandas and scikit-learn across five disease-risk workflows, performing data preprocessing, exploratory analysis, and model evaluation on clinical-style tabular datasets.
- Built a Flask-based interactive disease-risk prediction application spanning five workflows, earning recognition as a Top 10 Finalist at the Smart Pune Health Hackathon.

TECHNICAL SKILLS

- Programming & Statistics:** Python, SQL, R, Pandas, NumPy, Scikit-learn, Statistical Analysis, Hypothesis Testing, Predictive Modeling
- Analytics & BI:** Tableau, Power BI, Excel, Business Intelligence, Dashboard Design, KPI Analysis, Data Visualization, Exploratory Data Analysis
- Data Engineering:** Databricks, PostgreSQL, MySQL, ETL Pipeline, Data Transformation, Data Warehousing, AWS Glue, Redshift, S3, Lambda
- AI & Automation:** Large Language Models, RAG, LangChain, LangGraph, Workflow Automation, FastAPI, Docker, Google Cloud Platform (GCP), Codex, Cursor, Claude Code

CERTIFICATIONS & ACHIEVEMENTS

- Winner - Virtusa Jatayu S3 Hackathon
- AWS Academy Graduate - Data Engineering | Machine Learning Foundations
- Google IT Automation with Python Professional Certificate.
- IEEE Paper Publication - ICCAKM 2023
